产品简介 Brief account of product

WL series vertical sewage pump is a new-generation product successfully developed by this Co. by way of introducing the advanced know-how from both at home and abroad, upon the requirements and conditions of use of the users and reasonable designing and features high efficiency, energy saving, flat power curve, non-block-up, wrapping-resisting, good performance etc.

This series pump uses single(dual) great flow-path impeller or the impeller with dual or three blades and, with the unique impeller's structure, has a very good flow-passing performance, and equipped with reasonable spiral housing, is made to be high effective and able to transport the liquids containing solids, food plastic bags etc. long fibres or other suspensions, with the maximum diameter of the solid grains 80~250mm and the fibre length 300~1500mm.

WL series pump has a good hydraulic performance and a flat power curve and, by testing, each of its performance index reaches the related standard. The product is greatly favoured and evaluated by the users since its being put into the market for its unique efficiency and reliable performance and quality.

产品特点 Characteristic

1. The unique impeller design and the great flow-path block-up resisting hydraulic parts greatly enhance the ability for sewage to pass and effectively have fibre matters and solid grains passing through.
2. It belongs to the integrated electromechanical product with both pump and motor in one shaft to directly drive, resulting in compact structure and stable performance.
3. Of a strong suitability, suitable for transporting city's living sewage, factory, mine etc. enterprises' sewage.
4. Easy operation, low cost for maintenance; can be overallly placed outdoors to work without need of machine room, saving great deal of construction fees.
5. Mechanical seal is made of hard wearable corrosion-proof tungsten carbide and features durability and wearability and can safely and continually run over 800h.
6. The motor is reasonably fitted with, high overall efficiency, good hydraulic performance and low noise at running.

产品主要用途 Main purpose

This product is mainly used to transport city's living sewage, factory, mine etc. enterprises' sewage, slurry, night soil, ash and dregs, paper pulp etc. also for cycle water pump, water supply and drain pumps, exploration, mine fitted auxiliary machine, methane-generating pit in countryside, farming irrigation etc. purposes.

型号说明 Model description

泵的使用条件 Conditions of use

- 1、介质温度不超过80℃，介质密度为1200kg/m³。
 - 2、铸铁材质的介质PH值在5~9范围内。
 - 3、泵、机为整体结构，其工作环境温度不得超过40℃，相对湿度不超过95%。
 - 4、一般情况下，泵必须在规定扬程范围内工作，保证电机不超载，如需在低扬程状态下工作，应在订货时说明，以便厂家合理选型。
1. Medium temperature not over 80℃, medium density 1200kg/m³.
 2. The PH value of the medium in cast-iron material within 5-9.
 3. Both pump and motor are integrally structured, the ambient temperature in the place where it works is not allowed over 40℃, the RH not over 95%.
 4. The pump must work within the set head range in general so as to ensure the motor not to be overloaded. Make a note at order if it works in a low head state so as for this company to take a reasonable model selection.

结构说明 Description of structure

WL系列立式无堵塞排污泵为单吸蜗壳式泵，泵内装有无堵塞防缠绕型单(双)大流道叶轮。

该系列排污泵具有两种结构型式，一种是电机采用加长轴与泵叶轮直接联接，电机与泵为同轴一体结构；另一种是电机装在与泵体连为一体的支架上，电机轴与泵轴之间用联轴器联接，电机采用标准立式电机。

从电机上方看，泵为顺时针方向旋转。

每种结构型式具有两种不同的进水方式，与两种不同结构的底座连接。一是进口为水平吸入，具有转角功能，可根据具体使用条件，调整进、出口的夹角，以便于管路联接；二是进口为垂直轴向式吸入，以便于立式安装。

WL series vertical non-block-up sewage pump is a single-suction spiral casing type one and inside of it there are non-block-up wrapping-resisting single(dual) great flowpath impeller(s) mounted.

Two structural forms with the pump,one is the coaxial structure of both pump and motor,in which the extended shaft of the motor is directly connected to the impeller of the pump;the other is the motor is mounted on the stand integrated with the pump casing and a clutch is used to have both shafts of the motor and the pump connected,the motor used is the standard vertical one.

The pump moves CW viewing from the top of the motor.

Two water inlet modes with each form of structure,they are connected to the two foundations of different structures: one is horizontal suck-in on the inlet and has an angle-turnable function to adjust the angle between both inlet and outlet upon the conditions of use so as to help for pipeline joint;the other is vertical axial suck-in on the inlet for the sake of vertical installation.

泵的安装和使用 Installation and use

- 1、连接泵的管路，应另设支架，不允许将其重量加在泵体上。
- 2、为使用安全起见，在泵的进、出口管路上应各安装一只调节阀，并在泵的出口处安装一只压力表，以保证泵在规定工况下运行，确保泵的正常运行，提高泵的使用寿命。
- 3、安装时必须拧紧地脚螺栓、检查泵和电机的紧固情况和有无损伤。
- 4、输送高温液体时，泵座的底脚螺栓不应固定，使管路系统在热胀冷缩时，泵能与管路一起移动，以避免泵承受管路的热变形。

- 1、A stand should be used to connect the pipeline of the p-ump and do not let the weight of the pipeline supported by the pump casing.
- 2.For the sake of safe use, mount a regulation valve separat-ely on both inlet and outlet pipelines of the pump and a piez-ometer on the outlet to ensure the pump to run under the set w-orking conditions so as to make sure of its normal running and raise its duration.
- 3.In installation, tighten the foot bolts, check if both pump and motor tightened and damaged.
- 4.When to transport high-temperature liquids, the foot bolts on the pump foundation can not be fixed so as to let the pump a-ble to move together with the pipeline when they are in heat-exp-ansion and cold-shrinkage to avoid it from being deformed due to the heat from the pipeline.

泵的维护和保养 Maintenance

- 1、泵的进口管路必须充满液体、严禁在缺液状态和汽蚀工况下运行，以提高泵的使用寿命。
- 2、电泵不得长期处于低扬程状态下运行，定期、定时检查电机电流值，以防水泵因过载而烧坏电机。
- 3、若泵为铸铁材料时，在冬季安装应防止击破，温度特别低时，应加以保温处理。
- 4、泵长期运行后，应停车检查，必要时可更换易损零件、机械密封及轴承，机组大修期一般为一年。

- 1、The inlet pipeline of the pump must be fully filled with liquid and never let the pump running under the status of liqu-id-missing and under the working condition of vapour corro-sion so as to enhance its duration.
- 2、Do not let the pump running for a long time under a low head status and periodically check the current value of the motor to prevent the motor from being burnt due overload on the pump.
- 3、The pump, If made of cast-iron material, should be prot-ected to avoid it from being broken due to knocking in installa-tion in winter and take warming work for it at a specially low te-mperature.
- 4、Stop and check the pump after it runs for a long time and, if necessary, replace the easily worn-out parts, mechanical seal and bearing. The period for the pump unit to be exhausted is one year in general.

故障原因及排除方法 Failures causes and troubleshooting

故障现象 Failure	原因分析 Causes	排除方法 Trouaubleshooting
流量不足或不出水 Insufficient flow or no water out	1、叶轮旋转错误 Wrong direction the impeller moves in 2、阀门是否打开或完好 Valve is opened or intact 3、管道叶轮被堵 Pipeline's impeller blocked up 4、扬程过高 Too high head 5、抽送介质密度较大 Bigger density of the medium being transported 6、密封圈损坏 Seal-ring damaged	1、调整叶轮旋转方向 Adjust the direction 2、检查、维修、排除 Check, repair, remove 3、清理杂物 Make up foreign matters 4、改泵或降低扬程 Change pump or lower head 5、用水冲稀降低密度 Lower density by way of using water to make it thinner 6、更换 Replace it
运行不稳定 Unstable running	1、叶轮不平衡 Impeller unbalanced 2、轴承损坏 Bearing damaged	1、送制造厂调换或校正 Replace it by returning it to the manufacturer or correct it 2、更换 Replace it
泵不能启动 Pump can not be started	1、缺相 Lack of phase 2、叶轮卡住 Impeller jammed 3、定子绕组烧坏 Stator's winding burnt	1、检查电器及电路，进行修复 Check electric appliances and circuit and repair 2、排除杂物 Get rid of foreign matters 3、修理，更换绕组 Repair and replace winding
电流过大 Too heavy current	1、工作电压低 Low working voltage 2、管道、叶轮被堵 Pipeline, impeller blocked up 3、抽送液体的密度或粘度较高 Higher density or viscosity of the liquid being transported 4、使用扬程过低 Too low head being used	1、调整工作电压 Adjust the voltage 2、清理管道、叶轮堵物 Make up pipeline, impeller's clogs 3、改变密度或粘度 Change density or viscosity 4、减少流量，提高扬程 Reduce flow, raise head
压力不足 Unenough pressure	1、机械密封损坏或泄漏 Mechanical seal damaged or leaks 2、电缆线破损 Cable broken	1、更换 Replace it 2、更换 Replace it
